GREIF

GREIF MULTIWALL PACKAGING
Quick turns that revolve around you.

Quick Turns. Quality Bags.

We offer a full line of industrial and consumer multiwall bags, including biaxially oriented polypropylene (BOPP) and woven polypropylene (WPP) shipping bags and flexible intermediate bulk containers (FIBC), along with the flexibility and connections to get the bag you need, when you need it.

Our commitment to quality is uncompromising.

And it's backed by Greif's proven processes for lean manufacturing and Six Sigma principles, prepress quality control procedures and personal sales/service. Added all together we make sure what's inside your bag lives up to the same exacting standards as what's on your bag.

The choice is yours. Full service or just the services you need.

From design through delivery and everything in between, we have the team to get your job done quickly—on time, every time. And don't forget our cost-saving paper and inventory programs, too.

Simply put, Greif is the most responsive, full-service provider of quality multiwall packaging in the industry. So turn to Greif for quick turns, quality and value.

The Benefits of a Greif Food Grade Multiwall Bag

● AIB CERTIFIED

This certification promises that Greif is committed to keeping your product safe through independent inspections, audits and training.

● FDA GOOD MANUFACTURING PRACTICES

At Greif we follow FDA requirements for food safety regulations.

● OUTSTANDING PRODUCT PROTECTION

With options like the fully removable poly bag inside a multiwall paper bag or our heat-sealed integrally lined bags, you can rest assured your product is protected.

● CERTIFIED METAL FREE

What's the point to having a strong bag if the bag can contaminate your product? Our bags are guaranteed to be metal free to protect your investment.

● FREE-FLOATING EDGE FORMERS

With an inside poly-film barrier you don't need water as a lubricant. And getting rid of moisture inside the bag eliminates the worry of mold or bacterial contamination.

● STRAIGHT BAR CUT

The straight bar cut offers the best sealing and prevents product sifting. An added benefit—the top closure seals better and performs better on filling and palletizing equipment.

● PERFORMANCE TESTING

No matter how appealing your bag is on the shelf, it has to perform in the field everyday to meet your customers' expectations and your profit margins. Greif offers quality, custom, food-grade testing options and programs to evaluate your bags inside and out so you know your product is protected.

● HIGH QUALITY FILMS

We don't just manufacture your bag—we engineer it specifically for your product, with just the right number of plies and only the best PE films available, resulting in better moisture and product protection in every bag.

● BULK BAGS

When bulk bags are critical to your business needs, we can help. We offer immediate response stock bags and inventory programs.
